

## *Do you know why your filling line can't run any faster?*

*MCI Myrias Line Log software monitors production line throughput and utilization, and records reasons for lost time*

**MCI Myrias Line Log** software automatically monitors the count of product through your filling line, charting progress against the requirements of the production plan. And when the line stops - or if you prefer, when it restarts after a stoppage - your Operator can quickly record the reason for lost production from a list of standard texts, pre-configured by you.

**MCI Myrias** colour graphic reports display valuable information about production progress against plan, line efficiency and utilisation. They also analyse the reasons for stoppages, telling you where to concentrate your efforts to turn wasteful downtime into profitable production.

- ◆ *Runs on standard **MCI Myrias** system with input from terminals, checkweighers, PLCs etc.*
- ◆ *Manager-edited texts lists for stoppage and downtime reasons.*
- ◆ *Up to 100 editable texts per production Line.*
- ◆ *Line performance can be logged against Product, Batch, Operator, Customer etc.*
- ◆ *Full accountability and traceability data for every recorded stoppage.*
- ◆ *Colour bar graphs for performance indicators.*

**MCI Myrias Line Log** software is just one module in a suite covering many aspects of manufacture. In total, over thirty integrated software modules are available to record, control and report on every aspect of procurement, planning, production and despatch. **MCI Myrias** has a record of reducing manufacturing costs in almost every field of application.
